

What to Do When Splunk GUI Is Down

1. Edit the Configuration File

Open the terminal and run:

RUN: `nano $SPLUNK_HOME/etc/system/local/web.conf`

2. Update the `web.conf` File

Add the following lines or modify if already present:

```
[settings]
httpport = 8080
```

3. Restart Splunk

Apply changes by restarting Splunk:

Run: `sudo ./splunk restart`

4. Check the GUI

Open a web browser and access the Splunk GUI at:

`http://<hostname>:8080`
