

# First 15

## 1. Change Administrator Password

- `configure`
- `set mgt-config users <admin> password`

Example below:

```
admin@lab-firewall> configure
admin@lab-firewall# set mgt-config users adminTest password
Enter password:
Confirm password:

[edit]
admin@lab-firewall# exit
Exiting configuration mode
admin@lab-firewall>
```

## 2. Check other user accounts

- `show mgt-config users`
- Delete any unknown accounts
- `Delete mgt-config users <admin>`

## 3. Check current Interfaces

- `show interface all`
- If they are already made great!
- Make three new interfaces.
  - `set zone <zonenumber>`
  - `set zone <zonenumber> network layer3 <eth>`

## 4. Import Firewall Config

- Device > Setup > Operations
- Import named configuration snapshot
- Load named configuration snapshot
- Commit

## 5. Apply ACL Rules to Firewall

- `set rulebase security rules <Rule Name> from <Source Zone> to <Destination Zone>`  
`source any destination any application any service any action allow`
- For all rules in our ACL

## 6. Monitor Logs and IDS plus Injects
